

Preserve animal health and enhance their performance.

Cobiotex technology for a better health prevention in your farm.

Multi-strains bacteria complex specifically formulated to obtain an optimal implantation in farms

Strains registered at the Pasteur Institute (CNCM)

Spatial competition and adhesion capacity

Fixation of bacterial strains of complexes on different surfaces, even the most difficult ones such as stainless steel

Guarantee of implantation

Nutritional competition with the other bacteria from the environment

Competition thanks to enzymatic equipment and the rapid multiplication capacity of our bacteria

Guarantee of colonization

Inhibition capacity

Inhibition mechanisms put in place by the bacteria of our products against environmental pathogens (tested in laboratory)

Reduction of pathogens pressure on livestock

Reduce the apparition of bacterial environmental diseases (diarrhea, arthritis, streptococcus...)

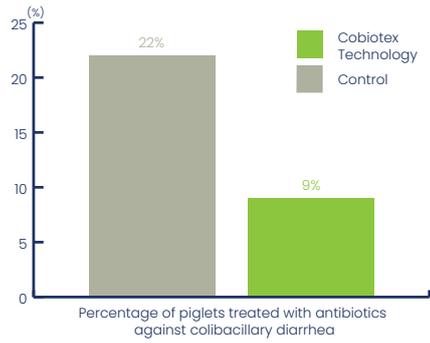

Improvement of the growth of the piglets by improving their health

-20%

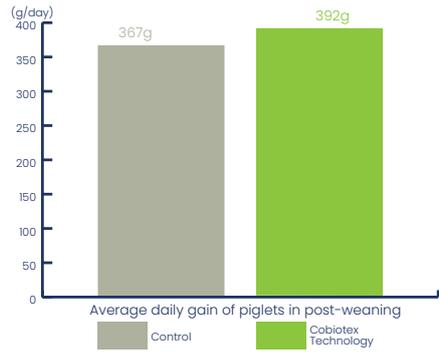

of mortality of piglets in average

Reduction of environmental diseases

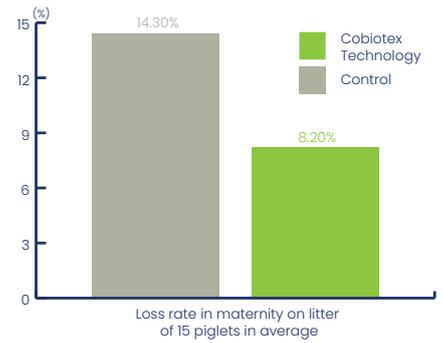

Field trial, France, in a farm of 500 sows (2021)

Better growth of piglets

Experimental trial, France, in collaboration with IFIP (2013)
Published at JRP 2014

-20% of mortality in farrowing and post-weaning room

Field trial, France (2022)

Cobiotex 410

Product on carrier ready to use

Cobiotex Elit'

Highly concentrated soluble product to diluate

Dosage	Cobiotex 410	Cobiotex Elit' <i>(to add in case of big sanitary issues)</i>
In farrowing room	200g/sow at arrival 400g at farrowing Then 200g/sow/week	5g/sow in the room
In gestating room	First month, 200g/sow/week Then 150g/sow/week	5g/sow in the room
In gestating room	50g/m ² /week	1g/m ² /week
